Electrician Installation Manual Aurora Alternatives 2 Ceiling Fan

IMPORTANT INFORMATION **ELECTRICIANS MUST READ PRIOR TO INSTALLATION**

1. Distributor and installer details and purchase receipts are essential for on-site warranty claims and must be presented to repair personnel, make sure you record your details in the Fan Owner Warranty and Operations Manual.
2. Fans and fixed wiring products must only be installed by persons who are appropriately licensed by the applicable State regulatory body. Therefore, to protect our repair personnel, on-site warranty claims will not be accepted if products have been installed by unlicensed persons.
3. Damage caused by incorrect installation, force-majeure, electrical surges, lightning, power grid fluctuations, water or by connection to alternative power supply sources (such as solar inverters, etc.) is not eligible for warranty repair.
4. Blades must be replaced only as a complete set. Blades are supplied only as a pre-balanced set and the replacement of individual blades may void the warranty by causing mechanical damage to the motor, excessive noise or premature wear.
5. When products are installed in a location requiring special access equipment (such as scaffolding or scissor lifts, etc) the cost of providing, installing and operating special access equipment must be borne by the site owner.

For safety, and to protect your customers warranty, the following must be taken into account when installing and operating the product (s):

- (a) DO NOT USE SOLID-STATE WALL CONTROLLERS. Neither leading nor lagging edge controllers will give satisfactory performance. Wall controls must only be types approved for use by Hunter Pacific International.
- (b) The fan, light and bracket must be earthed.
- (c) Fan and light must be run from the same phase and preferably the same final circuit.
- (d) Mounting bracket must be firmly screwed to a solid structure such as a concrete ceiling, steel structure or timber framing. If additional bracing is added it must be firmly secured to the rafters and not left floating on the ceiling. Special mounts, such as T-hooks, are available for certain types of installation.
- (e) After installation, fan blades must be at least 2.1 m (7 feet) above floor level.
- (f) The use of these products by children and the infirm must be under supervision.

**IF THERE ARE ANY PROBLEMS WITH THE PRODUCT AT TIME OF
INSTALLATION THE INSTALLER MUST CONTACT THE WARRANTY
HOT LINE NUMBER **1300 360 280**. BEFORE LEAVING THE JOB
SITE. PLEASE DO NOT REMOVE THE FAN FROM THE CEILING
ONCE INSTALLED UNLESS INSTRUCTED TO DO SO.**

Aurora Alternatives 2 Ceiling Fan

I N T E R N A T I O N A L

Assembling the fan

Fig. 1

STEP 1 (Fig. 1)

PERFORM THIS STEP IF THE WIRES HAVE NOT BEEN FED THROUGH THE DOWN ROD.

- a) Loosen the ball joint screw and remove the ball joint pin to separate the down rod from the ball joint.
- b) Feed wires from motor housing up and through the down rod.
- c) Insert the down rod pin into the connection collar and the down rod cotter pin (avoid pinching wires). Clip in the cotter pin key and secure down rod with the other shorter down rod screw provided.
- d) Slide on canopy cover and refit the ball joint.
If an extension rod needs to be installed please go to page 11.

Fig. 2

STEP 2 (Fig. 2)

- a) Drill a hole in the timber nogging for wiring.
- b) Use the two hex screws to secure the hanger bracket onto the timber nogging. The timber nogging should be supplied by the installing electrician and must be supported between the two ceiling joists as shown in the diagram above.

Fig. 3

STEP 3 (Fig. 3)

- a) TIGHTEN THE GRUB SCREW.**
(This is important to ensure the fan will not wobble and the weight of the fan is supported).
- b) Hang the ball joint into the hanger bracket.**
Ensure the groove on the hanger bracket is locked into the slot on the ball joint.

1. **Do not** attempt to operate the fan (or optional light kit) with any wall control that is not approved by Hunter Pacific for use with its fans. DO NOT use solid state controllers. The use of unapproved controllers will void your warranty.
2. **Do not** mix blade sets from one fan to another as this may upset the balance of the fan. If only one blade is damaged you are still required to replace with a new set.

Electrician Installation Manual

Aurora Alternatives 2 Ceiling Fan

I N T E R N A T I O N A L

Assembling the fan

Fig. 4

STEP 4 (Fig 4 & 5)

- Connect wires from the fan to wires in the ceiling via the terminal block on the hanger bracket (refer to figure 4 and 5).
- Make sure earth wires are also connected.
- Connect light wires (red/white) if a light fitting is going to be used. (Cap seal light wires if a light fitting is not going to be used).

Wiring Instructions (with and without accessory light)

Fig. 5

Separate terminal
For when 3 pole
Block is fitted.

Wiring for use with 3 pole block
- Colours representative only
- Separate extension terminal for active for light when 3 pole block fitted.

Fig. 6

STEP 5 (Fig 6)

- Slide canopy cover up and over the hanger bracket.
- Twist the canopy to locate screws holes then loosen canopy screws half way.
- Now twist the canopy cover in the opposite direction and fully tighten screws until the canopy cover is stabilised.

- Do not** attempt to operate the fan (or optional light kit) with any wall control that is not approved by Hunter Pacific for use with its fans. DO NOT use solid state controllers. The use of unapproved controllers will void your warranty.
- Do not** mix blade sets from one fan to another as this may upset the balance of the fan. If only one blade is damaged you are still required to replace with a new set.

Electrician Installation Manual

Aurora Alternatives 2 Ceiling Fan

Assembling the fan

STEP 6 (Fig 7)

- Attach blades to the blade holders on the motor housing using the 3 screws and washers provided.
- Repeat this procedure for the other 3 blades.

STEP 7 (Fig 8)

- Lift the switch cover to expose the reverse switch.
- The reverse switch should be pushed fully to the left for Summer (fan spins anticlockwise) and pushed fully to the right for Winter (fan spins clockwise).
- Make sure reverse switch is not stuck in its neutral position otherwise the fan will not spin.

- Do not** attempt to operate the fan (or optional light kit) with any wall control that is not approved by Hunter Pacific for use with its fans. DO NOT use solid state controllers. The use of unapproved controllers will void your warranty.
- Do not** mix blade sets from one fan to another as this may upset the balance of the fan. If only one blade is damaged you are still required to replace with a new set.

Attaching an accessory light kits—Aurora2 light kit

78mm halogen light (MAX 100W)

STEP 1 (Fig. 9)

- Turn base plate to remove the plug and base plate from the motor housing.
- Loosen screws to remove the lower rim.

STEP 2 (Fig. 10)

- Use the connectors to attach the light wires from the motor housing to light assembly kit.
- Attach and secure the light assembly kit using the 3 screws provided.

STEP 3 (Fig. 11)

- Plug the light globe into the socket. **DO NOT touch the light globe with your fingers.**
- Gently push the glass cover upwards and turn it to attach the light glass to the fan.

E14 light (MAX 2x40W)

STEP 1 (Fig. 12)

- Turn base plate to remove the plug and base plate from the motor housing.
- Loosen screws to remove the lower rim.

STEP 2 (Fig. 13)

- Use the connectors to attach the light wires from the motor housing to light assembly kit.
- Attach and secure the light assembly kit using the 3 screws provided.

STEP 3 (Fig. 14)

- Install the light bulbs in the light sockets.
- Gently push the glass cover upwards and turn it to attach the light glass to the fan.

- Do not** attempt to operate the fan (or optional light kit) with any wall control that is not approved by Hunter Pacific for use with its fans. DO NOT use solid state controllers. The use of unapproved controllers will void your warranty.
- Do not** mix blade sets from one fan to another as this may upset the balance of the fan. If only one blade is damaged you are still required to replace with a new set.

Attaching an accessory light kit — Aurora2 light kit

GX53M 14W compact fluorescent light

STEP 1 (Fig. 15)

- Turn base plate to remove the plug and base plate from the motor housing.
- Loosen screws to remove the lower rim.

STEP 2 (Fig. 16)

- Use the connectors to attach the light wires from the motor housing to light assembly kit.
- Attach and secure the light assembly kit using the 3 screws provided.

STEP 3 (Fig. 17)

- Fit the compact fluorescent light to the light socket.

STEP 4 (Fig. 18)

- Turn the light to attach it firmly to the light socket.
- Gently push the glass cover upwards and turn it to attach glass cover to the fan.

- Do not** attempt to operate the fan (or optional light kit) with any wall control that is not approved by Hunter Pacific for use with its fans. DO NOT use solid state controllers. The use of unapproved controllers will void your warranty.
- Do not** mix blade sets from one fan to another as this may upset the balance of the fan. If

Attaching an accessory light kit — Standard accessory light kit

STEP 1 (Fig. 19)

- Turn base plate anticlockwise to remove the plug and base plate from the motor housing. Do not throw away base plate away.

STEP 2 (Fig. 20)

- Loosen screws to remove the light kit rim.

STEP 3 (Fig. 21)

- Once the motor housing lower rim is removed, the light wires coming from the motor housing should be exposed.
- Cut and remove wire connectors.
- After removing the wire connectors feed the light wires through the thread of the motor housing lower rim.
- Tighten screws (removed from step 2) to secure the motor housing lower rim back onto the motor housing upper rim.

- Do not** attempt to operate the fan (or optional light kit) with any wall control that is not approved by Hunter Pacific for use with its fans. DO NOT use solid state controllers. The use of unapproved controllers will void your warranty.
- Do not** mix blade sets from one fan to another as this may upset the balance of the fan. If only one blade is damaged you are still required to replace with a new set.

INTERNATIONAL

Attaching an accessory light kit — a standard accessory light kit

STEP 4 (Fig. 22)

- Feed wires from the motor housing lower rim through the hole in the centre of the base plate .
- Attach the base plate to the motor.

STEP 5 (Fig. 23)

- Feed wires through the thread of the upper part of the light kit.
- Secure upper part of the light kit to the motor housing by tightening the thread.
- Connect light wires to the terminal block in the lower part of the light kit.
- Secure the lower part of the light kit to the upper part of the light kit by the tightening the light kit screws.
- Fit light globes in to the light kit.

(note: Only specified globes should be used).

- Do not** attempt to operate the fan (or optional light kit) with any wall control that is not approved by Hunter Pacific for use with its fans. DO NOT use solid state controllers. The use of unapproved controllers will void your warranty.
- Do not** mix blade sets from one fan to another as this may upset the balance of the fan. If only one blade is damaged you are still required to replace with a new set.

Electrician Installation Manual Aurora Alternatives 2 Ceiling Fan

Attaching an extension rod - Hunter Pacific rods to be used ONLY

Fig. 24

Fig. 25

Step 1 (Fig. 24)

Loosen and remove the down rod screws and the down rod pin screw to remove the standard down rod from the motor housing.

Step 2 (Fig. 25)

Loosen the ball joint screw, take out the ball joint pin and remove the ball joint. Then slide off the canopy cover.

Fig. 26

Fig. 27

Step 3 (Fig. 26 & 27)

Now install the extension rod and reverse step 1 & 2 to secure the rod to the fan and the ball joint.

NOTE: If the extension rod needs to be shortened, cut the rod to the required length and drill the appropriate hole size to fit the ball joint pin. The cut end of the rod should be used on the ball joint end only. When installing a 1.8m extension rod the wiring will need to be extended and joined. This should be done using crimp style connectors.

1. **Do not** attempt to operate the fan (or optional light kit) with any wall control that is not approved by Hunter Pacific for use with its fans. DO NOT use solid state controllers. The use of unapproved controllers will void your warranty.
2. **Do not** mix blade sets from one fan to another as this may upset the balance of the fan. If only one blade is damaged you are still required to replace with a new set.

Trouble Shooting Tips - Fan

Fan will not start

- Check that the reversing switch is pushed fully into its Summer or Winter position.
- Check wire connections in the wall switch and terminal blocks, ensure all wires are making proper contact.
- If it is a Typhoon fan, check and ensure the reversing switch plate under the switch cover is not bent, also check the 3 wires coming from the switch plate are straight. Occasionally the switch plate may get bent during transportation, this allows the switch cover to press against the plate and stop the fan from working.
- If it is a Typhoon fan, check the nine pin plug under the switch cover is properly connected and the colours on the plug are corresponding.
- If it is a Concept fan and it has an external start up capacitor, check that this external capacitor is properly connected.

Fan speed does not correspond to the wall controller

- Check the speeds on the wall controller has been wired correctly and are making proper contact. Brown = speed 1, Purple= speed 2, Red = speed 3.
- Check wires in the terminal block are connected properly, connection wires should be stripped back at the connection point and unused wires should be sealed and capped off.
- Check that the reversing switch is pushed into its Summer or Winter position.

Fan is not responding to the remote control

- Check for flat battery. Make sure the dipswitch settings in the hand piece and the remote receiver for the same fan are corresponding.

Fan is wobbling

- Check the ball joint slot is locked into the hanger bracket groove.
- Make sure blades are a matching set; the letters on matching sets of blades should be identical with the numbers varying within 3 grams of each other.
- Check blade screws are tightened firmly. If necessary use balancing kit provided to settle the wobble.

Fan is noisy

- Check all screws and parts are secured firmly. Ensure there are no loose parts moving inside the motor housing.
- Make sure the fan is installed with a Hunter Pacific wall controller only, do not use solid state controllers as they can cause unpleasant motor noises.

Trouble Shooting Tips - Light

- **Light will not turn on** - Make sure globe has not blown and it is properly fitted between the metal prongs. Check all light wires in the light kit, the terminal block in the canopy cover and the wall switch has been connected together correctly.
- **Light is not responding to remote control**- Make sure globe has not blown and it is properly fitted between the metal prongs. Check all light wires in the light kit, the terminal block in the canopy cover and the wall switch has been connected together correctly. Check dip switch settings in remote hand piece and remote receiver correspond.
- **Light wires appear to be missing or too short** - Wires may be stuck in the motor housing. Carefully pull wires out of the motor housing, careful not to strip the wires as this may cause the fan to short.
- **Light flickers or flashes** - Check globe is secured between the metal prongs in the light kit. Make sure you are using the globes specified.
